

Final Risk Assessment

Overall screening result: Medium risk

This combines questionnaire, facial, and gaze information into a single overall risk level.

Combined screening results indicate moderate risk. Some assessment methods suggest possible concerns. This screening tool is not a diagnostic tool.

Consider discussing these findings with your child's pediatrician or a healthcare professional. They can help determine if further evaluation is appropriate.

Questionnaire Results

Type:

Score: 6.0 / 10

Risk Category: **High**

Score of 6/10 suggests elevated autism traits. This is a screening tool and not a diagnosis.

Facial Analysis (Supporting Signal)

Probability: 86.5%

Risk Category: **High**

Facial analysis suggests elevated risk indicators (probability: 86.49%). This is a supporting signal only and not a diagnostic tool.

Gaze Analysis (Supporting Signal)

Social Preference Index (SPI): 0.992

Social Frames: 237

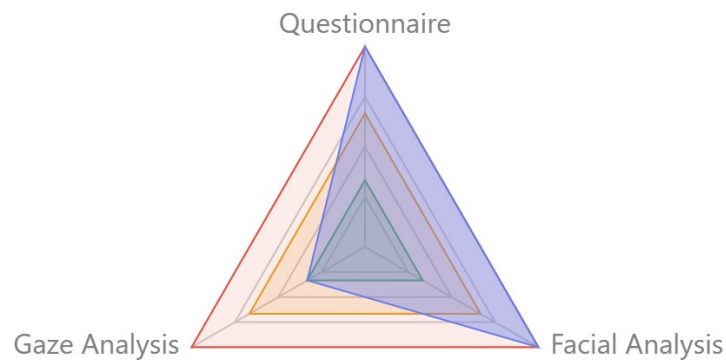

Geometric Frames: 1

Risk Category: **Low**

SPI of 0.99 indicates a strong preference for social stimuli, which is typical in neurotypical development. This is a screening signal only and not a diagnostic tool.

Screening Signals Overview

This spider chart compares typical low, medium, and high risk profiles with this screening across questionnaire, facial analysis, and gaze analysis (where available).

■ Typical Low ■ Typical Medium ■ Typical High ■ This Screening

Important Disclaimers

- This screening tool is NOT a diagnostic tool and does not provide a medical diagnosis.
- Results are based on screening assessments and should be interpreted by qualified healthcare professionals.
- No personal data, images, videos, or results were stored during this screening.
- All processing was done in real-time and all data has been discarded.
- If you have concerns about your child's development, please consult with a qualified healthcare professional, developmental pediatrician, or autism specialist.
